

WHY MAKE A PDF?

Every computer is different. The fonts, margins, colours and print settings. You need a way to carry your computer file over to PRINTHUT with the fonts, colours and margin settings and a pdf is the solution.

HOW TO MAKE A PDF

In most software such as Word, Excel and Photoshop, you can simply SAVE AS> and select PDF format.

MAKE SURE IT IS A PRINT QUALITY

MAKE SURE you check the options after selecting PDF as file format - you are looking for anything referring to file size or quality. Select PRINT / HIGH RESOLUTION quality.

WHAT IS CUT / TYPE / BLEED?

CUT or TRIM is the edge of the flyer where the page will be cut

TYPE refers to the type area - type that is too close to TRIM edges may be cut off and as such we advise clients to **allow at least 5mm type to the inside of a document.**

BLEED refers to colour that will be printed right to the edge of your page. If you do want to add bleed you need to supply a file that is larger than the page size **with at least 3mm bleed all around.**
